EDUCATION

UNIVERSITY OF MASSACHUSETTS AMHERST, GPA 4.0/4.0

Graduation'25

Relevant Coursework: Programming with Data Structures, Calculus II, Introduction to Linear Algebra

BASKING RIDGE HIGH SCHOOL, GPA 4.31/5.0

Graduation'21

SAT Superscore 1510/1600 with Math 800/800; SAT Chemistry 790/800; SAT Math 2 800/800

CERTIFICATIONS

* Python & Ethical Hacking from Scratch * Machine Learning A to Z * Basic to Advanced Python

TECHNICAL SKILLS

Programming Languages: Python, Java, C/C++

Frameworks: Django, Flask, Scikit-learn, Pytorch, Keras, OpenCV, NLTK

Other Tools: Git, Docker, Jenkins, Travis, OpenShift, OpenStack, Bash Scripts

WORK EXPERIENCE & CONTRIBUTIONS

SOFTWARE DEVELOPER

Build UMass (<https://buildumass.com/>)

Technology solutions for non-profit and local businesses

Sep'21 – Current

- Fueled startup (Funnl.co) by building a social platform that fosters deeper professional relationships
- Developed critical features of Email scheduling and Identity security
- Matured engineering practices by enabling Docker container debugging and Django unit tests to improve code coverage

RESEARCH INTERN

Jun'19 – Aug'19 , Jun'20 – Aug'20

Red Hat, ChRIS Project (<https://chrisproject.org/about>)

Next-gen medical image processing platform using the compute infrastructure of MOC (Mass Open Cloud)

- Designed monitors with Jenkins to measure system performance and created controls for taking corrective actions
- Enabled faster runtime for Image detection Proof of Concept by exploiting GPU capabilities with Tensorflow
- Ensured scalable and reliable services by enhancing multithreading capabilities and identifying deadlock scenarios

FREELANCER

Apr'20 – May'20

Background Removal Service, Project ID: #25018158

- Automatically detects and removes significant object from picture using OpenCV and PyTorch Image Classification model
- Deployed Flask service using Gunicorn on Digital Ocean

PRESENTED AT INTERNATIONAL WEBINAR

Sep'20

Rustamji Institute of Technology, Gwalior, India

Attended by 60+ college freshmen and sophomores with average feedback of Good-Excellent.

- Presented on the topic "Application of Artificial Intelligence in daily activities" with a focus on:
 - Approach to building simple solutions & utilizing Artificial Intelligence
 - Applying Mathematics in Software solutions
 - Using Infrastructure available on the internet to build applications

HACKATHONS & PROJECTS

SMART NOTES

Presented at HackPHS (Awarded Best Cloud Hack); <https://arnavn101.github.io/smartnotes/>

- Creates concise summaries and fetches the main topics of the text by applying Google's Page Rank algorithm

PATH FINDER

Presented at HackWHS (Finalist); https://github.com/arnavn101/Path_Finder

- Suggests an optimized college path for students based on their skills and academic record with artificial neural network

COTERIE

Presented at HackUMass; <https://github.com/arnavn101/Coterie>

- Social media app that promotes in-person socialization based on shared interests and ML models
- Using peripheral data, it builds a deep understanding of user's interests beyond what is noticeable
